

STATEMENT OF PURPOSE & MOTIVATION LETTER

Applicant: Fuad Ahmed Tuba, B.Sc.

Target Event: BFUTR Global Tech Summit 2026

Dates: November 19 – 20, 2026

Venue: The International Centre, 6900 Airport Road, Mississauga, ON L4V 1E8, Canada

Organizer: Obsidi® by BPTN (Black Professionals in Tech Network)

Access Tier: Explore & Discover Access Pass (\$0 Community Registration)

To:

The Organizing Committee & Community Leadership

BFUTR Global Tech Summit / Obsidi by BPTN

Mississauga / Toronto, Ontario, Canada

Dear Members of the BFUTR Organizing Committee,

I am writing to express my profound enthusiasm and submit my formal registration intent for the **BFUTR Global Tech Summit 2026**, taking place on **November 19–20, 2026**, at **The International Centre in Mississauga, Ontario, Canada**. As an African software engineer and Computer Science graduate from Ethiopia, participating in North America's largest tech summit celebrating Black tech excellence, diversity, and innovation represents a transformative milestone for my professional development and community advocacy.

1. Technical Background & Professional Alignment

I graduated with a Bachelor of Science degree in Computer Science from St. Mary's University in Addis Ababa, earning a Cumulative GPA of 3.04/4.00 and a Major GPA of 3.20/4.00. My academic focus centered on systems architecture, UNIX/Linux administration, database engineering, and advanced software design, highlighted by top marks in *Network and System Administration* (Grade A), *UNIX System Administration* (Grade A-), *Advanced Database Systems* (Grade A), and *Advanced Object-Oriented Programming* (Grade A+).

Currently, I serve as **Senior Software & Systems Engineer / Technical Operations Lead** at **Aduutech**, an emerging software engineering agency in Addis Ababa. In this role, I direct full-stack web application development, architect scalable databases, and oversee cloud and network systems. Furthermore, my professional repertoire includes designing database schemas for the Ethiopian Ministry of Revenue and holding executive training in Capital Markets and Securities Analysis from Addis Ababa University School of Commerce.

2. Commitment to Community Impact & Social Leadership

BFUTR's core ethos—empowering Black tech professionals, fostering mentorship, and building resilient communities—deeply mirrors my own journey. In addition to my commercial engineering work, I have dedicated the past **two continuous years (2024–2026)** to serving as a **Volunteer Systems & IT Specialist** for the **Kolfe Keranio Sub-City Administration (Woreda 07 Education Office)** in Addis Ababa.

Providing my technical skills completely **free of charge as a community service**, I have repaired, diagnosed, and maintained over 40 school workstations, installed local area networks (LANs), and safeguarded educational databases for non-profit public schools. This experience reinforced my conviction that technology must be harnessed as an engine of community empowerment and economic mobility.

3. Purpose & Objectives at BFUTR Global Tech Summit 2026

Registering under the **Explore & Discover Access Pass**, my objectives at BFUTR 2026 in Mississauga are focused on technical expansion and professional networking:

- **The Innovation Marketplace:** Engaging with international tech enterprises, evaluating cutting-edge software platforms, cloud infrastructure tools, and AI integrations that can be deployed within developing markets.
- **Peer Networking & Recruiter Sessions:** Connecting with fellow Black engineers, tech founders, and industry leaders from across North America to exchange methodologies on building scalable, fault-tolerant software systems.
- **Executive & Leadership Insights:** Learning from keynote presentations by trailblazing Black technologists on navigating executive leadership, scaling engineering teams, and mentoring next-generation tech talent.

4. Knowledge Transfer to East Africa

Attending BFUTR 2026 is not merely an individual milestone; it is an investment in my local technology community. The insights, architectural frameworks, and mentorship networks gained at The International Centre will be brought back directly to Addis Ababa. I plan to:

1. Integrate modern agile development, cloud architecture, and security practices into Aduutech's software engineering lifecycle.
2. Establish community coding workshops and mentorship sessions for young students and aspiring tech professionals in the Kolfe Keranio community, inspiring the next generation of African tech leaders.

5. Conclusion

With my solid computer science foundation, commercial engineering leadership at Aduutech, and demonstrated track record of voluntary community service, I am eager to represent African tech talent at BFUTR 2026. I look forward to participating in this landmark gathering in Mississauga, Canada.

Sincerely,

Fuad Ahmed Tuba, B.Sc.
